JasonLLLL第三章-第三次作业

- 1. 参数
 - 1.1. 参数优先级
 - 1.1.1. retinanet_R_50_FPN_1x.yaml > Base-RetinaNet.yaml > defaults.py
 - 1.1.2. 优先级越高,修改参数后,会覆盖掉优先级低的文件的参数
 - 1.2. 参数详细程度
 - 1.2.1. retinanet_R_50_FPN_1x.yaml < Base-RetinaNet.yaml < defaults.py
- 2. Debug train_net.py
 - 2.1. Create Run Configuration: 'train net'
 - 2.1.1. 修改Working directory, 删掉/tools/
 - 2.1.2. Xiugai
 - 2.1.2.1. --config-file

./configs/COCO-Detection/faster_rcnn_R_50_FPN_1x.yaml

--num-gpus

1

SOLVER.IMS_PER_BATCH

1

INPUT.MIN_SIZE_TRAIN

(400,)

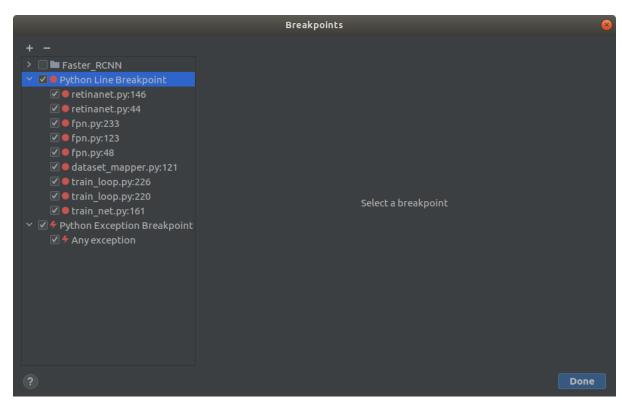

DATASET.TRAIN

('coco 2017 val',)

DATALOADER.NUM WORKERS

0

- 2.1.2.2. 调试算法的配置文件
- 2.1.2.3. 使用1个GPU
- 2.1.2.4. Batch size设置小一些, 这里设置为1
- 2.1.2.5. 设置图像大小,这里设置为400,最小不能小于120,否则会报错
- 2.1.2.6. 测试COCO验证集, 大约5000张图片
- 2.1.2.7. 为了更准确的卡断点,将NUM_WORKERS设为0
- 2.2. Breakpoints

2.3. Debug

2.3.1. 读取超参数

2.3.2.

2.3.3. 读取所有参数

```
### Self: Mine Namipate Code Baractor Nam Dook VCS Worldow Help

### Self Wine Namipate Code Baractor Nam Dook VCS Worldow Help

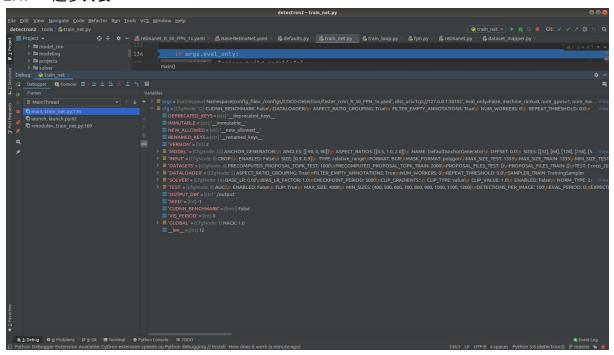

### Self Wine Namipate Code Baractor Nam Dook VCS Worldow Help

### Self Wine Namipate Code Baractor Nam Dook VCS Worldow Help

### Self Wine Namipate Code Baractor Nam Dook VCS Worldow Help

### Table Code Self-American Code
```

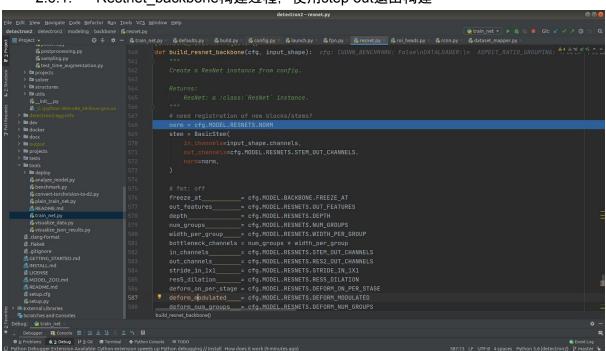

2.4. 超参列表

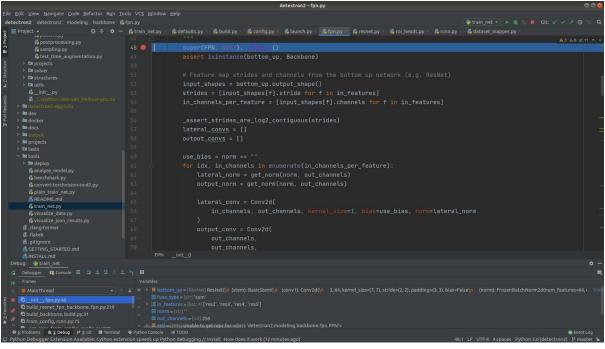

- 2.5. 构建
 - 2.5.1. 模型构建
 - 2.5.2. 优化器构建
 - 2.5.3. 数据读取构建
- 2.6. 构建resnet_backbone

```
### Sections and the property of the property
```

2.6.1. Restnet_backbone构建过程,使用step out退出构建

2.7. 定义FPN

构建RPN 2.8.
